1 Course Objectives

This course examines the macroeconomy in an international setting. The course covers the exchange rate and the current account, and relates their determination to world capital markets and the domestic macroeconomy. The course discusses economic policies and their effects under different exchange rate regimes—ranging from floating rates to fixed rates to monetary unions—and presents implications for the current account and the economy as a whole. A final part of the course turns to recent issues including the present U.S. current account imbalance and global financial crises.

2 Prerequisites

Economics 110A-B.

3 Readings

Lecture notes become available online at econ.ucsd.edu/muendler/teach/07s/103 before each class.

The readings (articles) help you review the lecture material beyond the textbook. They are available through the class web page (see link above). Web links to copyrighted readings only work from on-campus domains.

4 Problem Sets

There will be three problem sets, due on scheduled dates throughout the quarter. You are encouraged to work on the problems with your classmates. The first problem set will have eight questions, the latter two will have six questions each. Correct answers count for four points per question.

Your teaching assistant Oana Tocoian will hold three sections, on April 23, May 14 and June 5 to help you approach the problems. Your solutions to the problem sets will be graded and your performance on them will be part of the final grade. Problem sets have to be handed in before 2:00pm on the due date. You may bring them to class before it starts.

5 Assessment

There will be two midterm exams and a final exam. The two midterm exams will take 70 minutes each and the final exam will take 120 minutes. All exams are cumulative. Midterm exams take place in class and contain seven ten-minute questions each. The final exam contains twelve 10-minute questions. Problem sets have to be handed in before 2:00pm on the due date to be considered.

Your final raw score will be your total points from the three exams and the three problem sets:

Your final letter grade will be inferred from the typical grade distribution (curve) in economics classes at UCSD since 2000. You can find this grade distribution at econ.ucsd.edu/muendler/teach/07s/103. So, the difficulty or simplicity of problem sets and exams will not matter, whereas your relative performance in comparison to your classmates will determine your final letter grade (grades of F will not depend on the curve but on a minimal performance standard).

We will offer three review sessions, on April 30, May 23 and June 8, to prepare you for the exams.
