GPEC 435 — Fall 2020

Topics in International Trade

Empirical Exercise 1: Trade imbalances per capita

October 5, 2020

| Instructor: | Marc-Andreas Muendler | muendler@ucsd.edu |
|---------------------|-----------------------|--------------------|
| Teaching Assistant: | Jacob Orchard | jdorchard@ucsd.edu |

Due date and time: October 12, 5pm

Inputs and products

Please use Stata (any version) for your work. Please base your analysis on the following files

| ITPD-E by UTIC | itpd.dta |
|--------------------------------------------|---------------------------------------------------------|
| WDI by World Bank | wdi-2020sep30.dta |
| Coordinates by <i>naturalearthdata.com</i> | ne_110m_admin_0_countries_coor_2020sep30.dta |
| Geocoding by <i>naturalearthdata.com</i> | <pre>ne_110m_admin_0_countries_data_2020sep30.dta</pre> |

in the online data folder at https://econ.ucsd.edu/muendler/teach/20f/435/gen.

You may find the code from lecture a useful reference: lec01.do in the online lecture folder https://econ.ucsd.edu/muendler/teach/20f/435/lec01.

Please submit three products to canvas.ucsd.edu by the due time: (i) a file with results titled *ee01.pdf*, (ii) a log file titled *ee01.log*, and (iii) a Stata code file titled *ee01.do* (which may call other software). Your log file must exhaustively document the steps from the above input files to the output of results.

Tasks

- 1. Preliminaries.
 - (a) Use the ITPD-E data to compute each country's trade balance in 2016 (the trade balance is exports less imports).

Hint: Prepare ITPD export and import information separately, then merge the data at the country level one-to-one. Alternatively, aggregate ITPD-E separately by exporter and importer (using the Stata egen $\cdot = sum(\cdot)$, by (\cdot) command)..

- (b) Use the WDI data to obtain population and GDP in 2016. *Hint*: The GDP series is NY.GDP.MKTP.CD, the population series SP.POP.TOTL.
- (c) Combine the WDI information with the ITPD-E information.
- 2. Graph.
 - Plot two world maps of levels of positive and negative trade balances (in billions of current US\$ dollars) in 2016, one in reds for all countries with trade deficits and one in greens for all countries with trade surpluses.

Hint: Use the Stata spmap package as shown in *lec01.do*. Set the options to fcolor(Reds) or fcolor(Greens) and consider logarithmic break points for the legend, marking 0 1 10 100, and so forth in clbreaks (·) (and make sure to extend the series to cover the maximum).

- 3. Report.
 - Compute the trade balance per capita and list the three countries with the largest surplus per capita and the three countries with the largest deficit per capita in 2016.
